

Amendments to the Specification:

Replace paragraph 1 on page 1 as follows:

The present invention relates to polyamide molding compounds ~~according to claim 1~~ and blanks and light-reflecting components producible therefrom.

Replace paragraph 4 on page 6 as follows:

The object of the present invention is to suggest an alternative material, using from which injection-molded reflectors may be provided having an at least approximately equally good surface (which is suitable for direct coating using a metal coating) and at least approximately equally good thermal dimensional stability as using from the materials known from the related art.

Delete paragraph 5 on page 6 as follows:

~~This object is achieved by the features of independent claim 1. Preferred embodiments and further features result from the dependent claims.~~
